

The Diamond Wheel

You have purchased probably the best nail grinding wheel available today that is going to save you money. No more paper wheels breaking apart or smoothing out so quickly. You won't use the old paper ones anymore, it will be a thing of the past. Use it on wet or dry nails successfully.

This wheel will fit your Dremel grinder or any other grinder that takes a 1/8" shaft in the chuck.

You have received a wheel installed on a mandrel. Take your mandrel off your grinder and install this one in its place.

The wheel has less vibration and is quieter than the paper drums. Use on wet and dry nails or right in the tub as water actually helps.

Clean the wheel periodically using a toothbrush with soap and water. DO NOT USE a metal brush or you will ruin it. If you don't clean it now and then the dust will build up and it may stop cutting.

Note: Do not use this wheel for anything other than nails

Heat: If you think the wheel is getting too hot stick the wheel in a glass of water to cool or water in the tub. If you let the wheel get scorching hot it can melt the mandrel.
